

Application Development Engineer / Manager

– with Radisurf

We have a goal to use our chemistry and coatings as the basis for developing technology and products to grow into the life science, energy storage, or semiconductor/ electronics industries. To achieve a more sustainable society

Radisurf is a rapidly growing global innovator of cutting-edge nanocoating processes. An exciting, early stage technology company on a mission to create and provide the most sustainable industrial adhesion technologies.

Job Description:

You will be working closely with both internal & external personnel and partners to develop & execute technology & application development programs within their field of expertise with broad impact on the business.

Your role will include but not be limited to the following key areas:

- ◆ **design, collect data, analyze and compile reports on significantly complex technology and application development and demonstrations – from coating chemistry to final product in collaboration with our skilled chemists.**
- ◆ **develop, manage and execute technology and application development programs and project plans**
- ◆ **Interact with key customers to resolve complex process and integration issues**
- ◆ **estimated traveling time, up to 20 or 30%**

Background and Qualifications:

- ◆ **at least a master's degree (Prefer Ph.D) in science and engineering disciplines**
- ◆ **7-10 years of experience from multiple industry exposure would be beneficial**
- ◆ **regarded as the technical expert in their field**
- ◆ **solves complex problems; takes a new perspective on existing solutions; exercises judgment based on the analysis of multiple sources of information**
- ◆ **solves complex problems; takes a new perspective on existing solutions; exercises judgment based on the analysis of multiple sources of information**
